RE: Thermage 16cm² Clinical Trials

Dr. Bill Johnson's Innovations Medspa in Dallas, Tx, will perform a clinical trial using the new 16cm² tip for the instantaneous reduction in cellulite in stage 2 cellulite patients. Dr. Johnson and Innovations Medspa will perform ten separate procedures using this new tip on different body areas. Arms, Abdomen, Lovehandles, and Legs.

OBJECTIVE

Show an instantaneous reduction in circumferential size, increased speed, skin tightening, and less discomfort in patients with the new Thermage 16cm² procedure. The clinical trial will hold 10 carefully selected patients that will be treated in the same manner and recorded for authenticity. Thermage representatives will supervise Innovations Medspa during each procedure for authenticity and data collection. Photos will be taken by a professional Thermage photographer employee. The goal is to collect data to support the Thermage procedure, specifically the 16cm² Tip. We have chosen the 16cm² tip because it is new and very fast to do. If our hypotheses are correct, we aim to prove that there is a non-surgical procedure that can be done in 45 min+, one treatment, and can show instant results. Though the main goal is to show an instant change, Innovations Medspa will also monitor change over a 6 month period.

BENEFITS

Any data collected will be shared with Thermage for use in marketing and product development. Video and news coverage will also be shared for marketing purposes and physician training.
